Stainless Steel Sinks

About Artesian Sinks... FAQ's About Our Stainless Series

What does gauge mean in regards to stainless steel?

Stainless steel sink gauge ranges from 15 gauge (thicker premium quality) to 22 gauge (thinnest lowest quality). The benefit of thicker material is that it's more resistant to dings and dents, is less "noisy" than a thinner gauge sink and more robust in terms of handling things like the vibration associated with a garbage disposal. Good quality stainless steel sinks are usually 16 to 18 gauge and a premium quality sink is 15 gauge.

Do you include strainers with your sinks ?

None of our sinks include a strainer to allow the customer to choose they style they prefer and add the garbage disposal of choice. Our drain size is 3.5" US standard diameter.

Do your sinks have a sound insulation coating added to the bottom?

Yes, all of our kitchen sinks have this added to improve the overall quality of the product.

What do the different types of stainless steel material mean (304, 316 etc) ?

The term "stainless steel" refers to specific grades of steel that contain more than 10% chromium. Stainless steel may also include a variety of other elements (such as nickel, titanium, molybdenum, etc); it resists corrosion and is generally a stronger, more reliable steel. The most common grade:

Type 204: Commonly used in bathroom vanities, it usually is the material of choice for towel bars, vanity feet, brackets, accessories but over time can rust.

Type 304: Aside from having a higher content of chromium than most other types of stainless steel, type 304 also contains nickel; this enables it to withstand most ordinary corrosion in architecture, is durable in typical food processing environments, and resists most chemicals.

Type 316: Similar to type 304, but also contains a small amount of molybdenum, which is an alloy element #304 does not contain (but one that provides even stronger resistance to some deterioration). Types 304 and 316 are grades of stainless steel that are most often used in plumbing, as well as in the manufacturing of kitchen utensils and sinks.

What exterior finish style do your sinks have ?

Finish refers to the surface smoothness of the stainless steel material. A mirror finish has a high polish and is very smooth whereas a brushed finish is duller and more "frosted" in appearance. Most finishes, except for the polished mirror finishes, will exhibit a uniform "grain" direction that results from the brushing/finishing process. All of our sinks have a brushed finish.

What is a Zero Radius Corner ?

It describes the premium corner molding technique, a zero radius corner has a ninety degree bend different than the easier older style of rounding the corners. Zero radius technique requires more skill, more product waste and better molds and machines to perform. It is a much easier process to simply round corners then to crease them into perfect 90 degree bend

We only recommend professional installation of our products by licensed professional contractors.

PRODUCT INFORMATION

ARSS10-D Double Bowl

Premium 15 Gauge Stainless Steel "Bow" 60/40 Sink

- Zero Radius Premium Corner Design
- Premium Quality
- 15 Gauge Thickness
- 17" and 12" Double Bowl Style
- Front Slightly Bow's Forward for a nice design
- Fully Protected by extra thick heavy duty Sound Guard Undercoating for noise reduction.
- Cutting-edge zero radius corners design maximize capacity bowl size and offer a modern contemporary look.

PRODUCT INFORMATION

ARSS12-S Single Bowl

Premium 15 Gauge Stainless Steel "Bow" Front Farm Sink

- Zero Radius Premium Corner Design
- Premium Quality
- 15 Gauge Thickness
- Front Slightly Bow's Forward for a nice design
- Fully Protected by extra thick heavy duty Sound Guard Undercoating for noise reduction.
- Cutting-edge zero radius corners design maximize capacity bowl size and offer a modern contemporary look.

PRODUCT INFORMATION

ARSS20-D Double Bowl

15 Gauge Stainless Steel - Zero Radius Corners
Under Mount Kitchen Sink - Double Bowl

- Zero Radius Premium Corner Design
- Premium Quality
- 15 Gauge Thickness
- 17" and 12" Double Bowl Style
- Front Slightly Bow's Forward for a nice design
- Fully Protected by extra thick heavy duty Sound Guard Undercoating for noise reduction.

PRODUCT INFORMATION

ARSS22-S Single Bowl

15 Gauge Stainless Steel
Zero Radius Corners Under Mount
Kitchen Sink—Single Bowl

- Zero Radius Premium Corner Design
- Premium Quality
- 15 Gauge Thickness
- 17" and 12" Double Bowl Style
- Front Slightly Bow s Forward for a nice design
- Fully Protected by extra thick heavy duty Sound Guard Undercoating for noise reduction.
